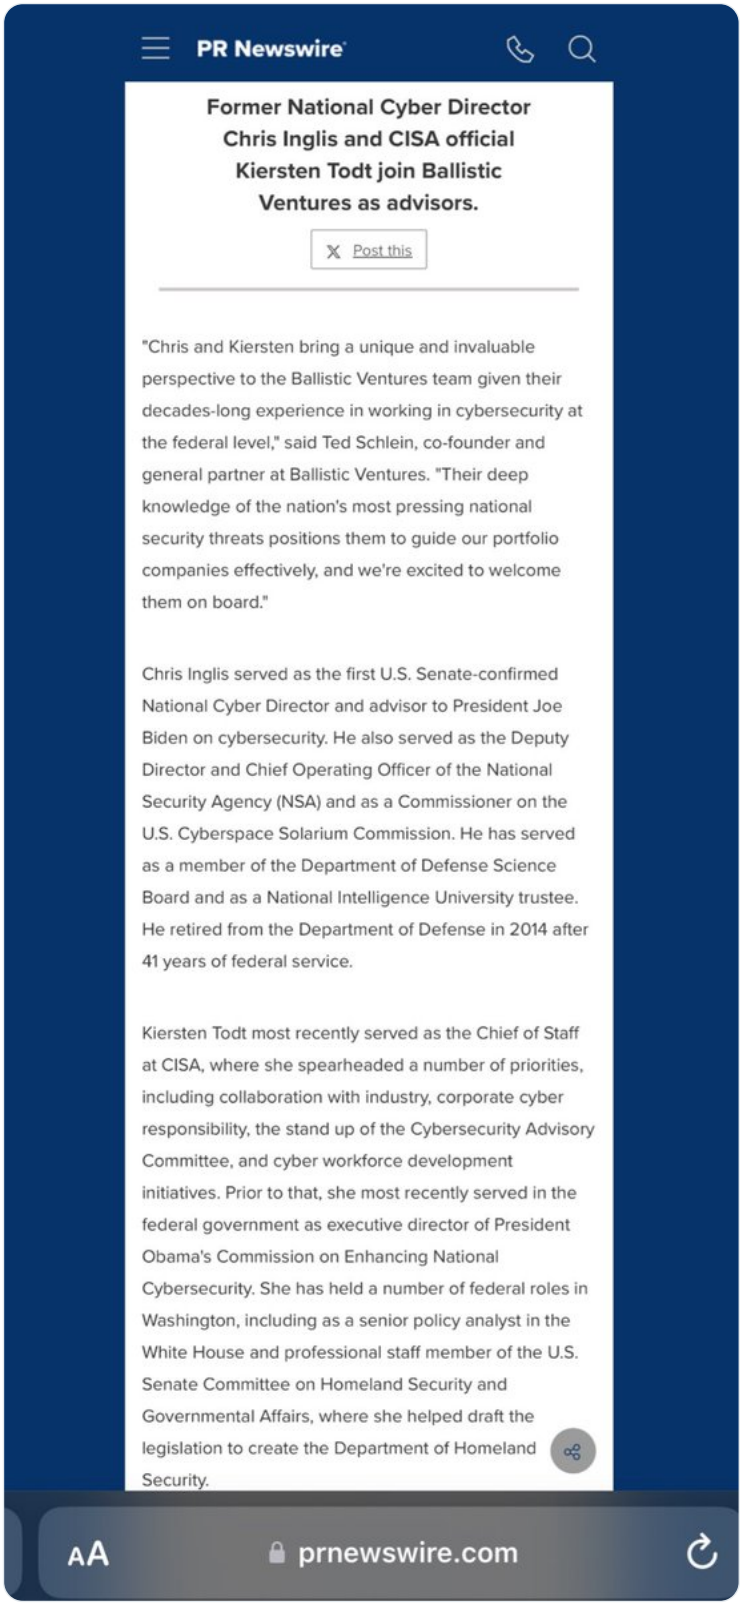
Todt: Writes legislation to create DHS.

Schlein: Gen. Partner at Kleiner who funnels hundreds of millions of $$$ to Unit 8200 startups (ex: Talon) as an IQT Trustee and sitting on DHSAC & CISA AC.

Talon: Names NSA Director Mike Rogers Chairman before it's acquired a year later.



PR Newswire
Former National Cyber Director Chris Inglis and CISA official Kiersten Todt join Ballistic Ventures as advisors.
Post this
"Chris and Kiersten bring a unique and invaluable perspective to the Ballistic Ventures team given their decades-long experience in working in cybersecurity at the federal level," said Ted Schlein, co-founder and general partner at Ballistic Ventures. "Their deep knowledge of the nation's most pressing national security threats positions them to guide our portfolio companies effectively, and we're excited to welcome them on board."
Chris Inglis served as the first U.S. Senate-confirmed National Cyber Director and advisor to President Joe Biden on cybersecurity. He also served as the Deputy Director and Chief Operating Officer of the National Security Agency (NSA) and as a Commissioner on the U.S. Cyberspace Solarium Commission. He has served as a member of the Department of Defense Science Board and as a National Intelligence University trustee. He retired from the Department of Defense in 2014 after 41 years of federal service.
Kiersten Todt most recently served as the Chief of Staff at CISA, where she spearheaded a number of priorities, including collaboration with industry, corporate cyber responsibility, the stand up of the Cybersecurity Advisory Committee, and cyber workforce development initiatives. Prior to that, she most recently served in the federal government as executive director of President Obama's Commission on Enhancing National Cybersecurity. She has held a number of federal roles in Washington, including as a senior policy analyst in the White House and professional staff member of the U.S. Senate Committee on Homeland Security and Governmental Affairs, where she helped draft the legislation to create the Department of Homeland Security.

Ted Schlein, General Partner, Kleiner Perkins and Executive Chairman, Ballistic Ventures —

Appointed by Secretary Alejandro Mayorkas - March 2022

Mr.
Ted

Ted Schlein | View Original

Schlein is a general partner at Kleiner Perkins, and executive chairman and founding partner at Ballistic Ventures. Mr. Schlein has spent the last 35 years helping to create transformative companies.

A Midas of investing and the former chairman of the National Venture Capital Association (NVCA), Mr. Schlein has served on over 50 public and private company boards, which include many of the world's greatest cybersecurity companies. As a company leader, he was the founding CEO of Fortify Software, which was later acquired by Hewlett-Packard.

Prior to Kleiner and Ballistic, Mr. Schlein served as vice president, Enterprise Solutions at Symantec. There he led the company's earliest antivirus effort, which included a move into the software utilities market with the launch of a commercial antivirus solution that became the industry gold standard. Mr. Schlein is an active member of the CISA Cybersecurity Advisory Committee, National Security Institute Advisory Board, and the Council on Foreign Relations, Independent Task Force on Cybersecurity.

TEAM8
Talon
TALON
Acquired by Palo Alto
Talon's secure and isolated endpoint environment, enables employees to work from anywhere and from any device, accessing corporate resources from both managed and unmanaged devices. Addressing the growing adoption of SaaS services and the expansion of attack surfaces created by distributed work models, Talon's technology significantly reduces the imposed risk. With Talon, security leaders gain vast visibility and high granularity of control, leveraging the Principle of Least Privilege throughout the organization. Talon raised a seed round of $26M from Lightspeed, Team8 and other leading angel investors in the cybersecurity industry. Talon's founding team brings together Ofer Ben-Noon (founder of automotive cyber security leader, Argus) and Ohad Bobrov (founder of mobile security pioneer, Lacoon) who met as former leaders of Unit 8200, Israel's elite military intelligence unit.

provide the essential VC support to set them on the right trajectory.
Since Ballistic's launch two years ago and the close of its inaugural $300 million fund, the firm has now invested in 18 revolutionary companies tackling challenges such as safeguarding the use of AI, mitigating disinformation, and securing applications, code, connected devices, data, identity, SaaS services, and more. In 2023, the VC firm was named by SC Media as "Investor of the Year."
Ballistic also supported the successful exit of portfolio company Talon Cyber Security, which was acquired by Palo Alto Networks in the largest venture-backed cybersecurity startup acquisition of 2023, according to PitchBook data.
"A record-paced technological evolution is happening right before our eyes. Coupled with the dynamics of an election year at home and conflicts unfolding across the world, the imperative for robust cybersecurity has never been more clear. Until we achieve global peace, cybersecurity is too important of an issue to ignore," said General Partner Ted Schlein. "For us, closing a new fund further fuels our commitment to addressing cyber challenges head-on, and we're looking for visionary entrepreneurs who share our passion and want to partner with us on this critical mission."

Imagine being as embarrassing and shameless a traitor as Mike Rogers.

It's not enough to sell your country out, but you also had to go on a worldwide marketing tour for Talon & Israeli cybersec, while pretending you didn't know your paymasters orchestrated 10/7 the month before.

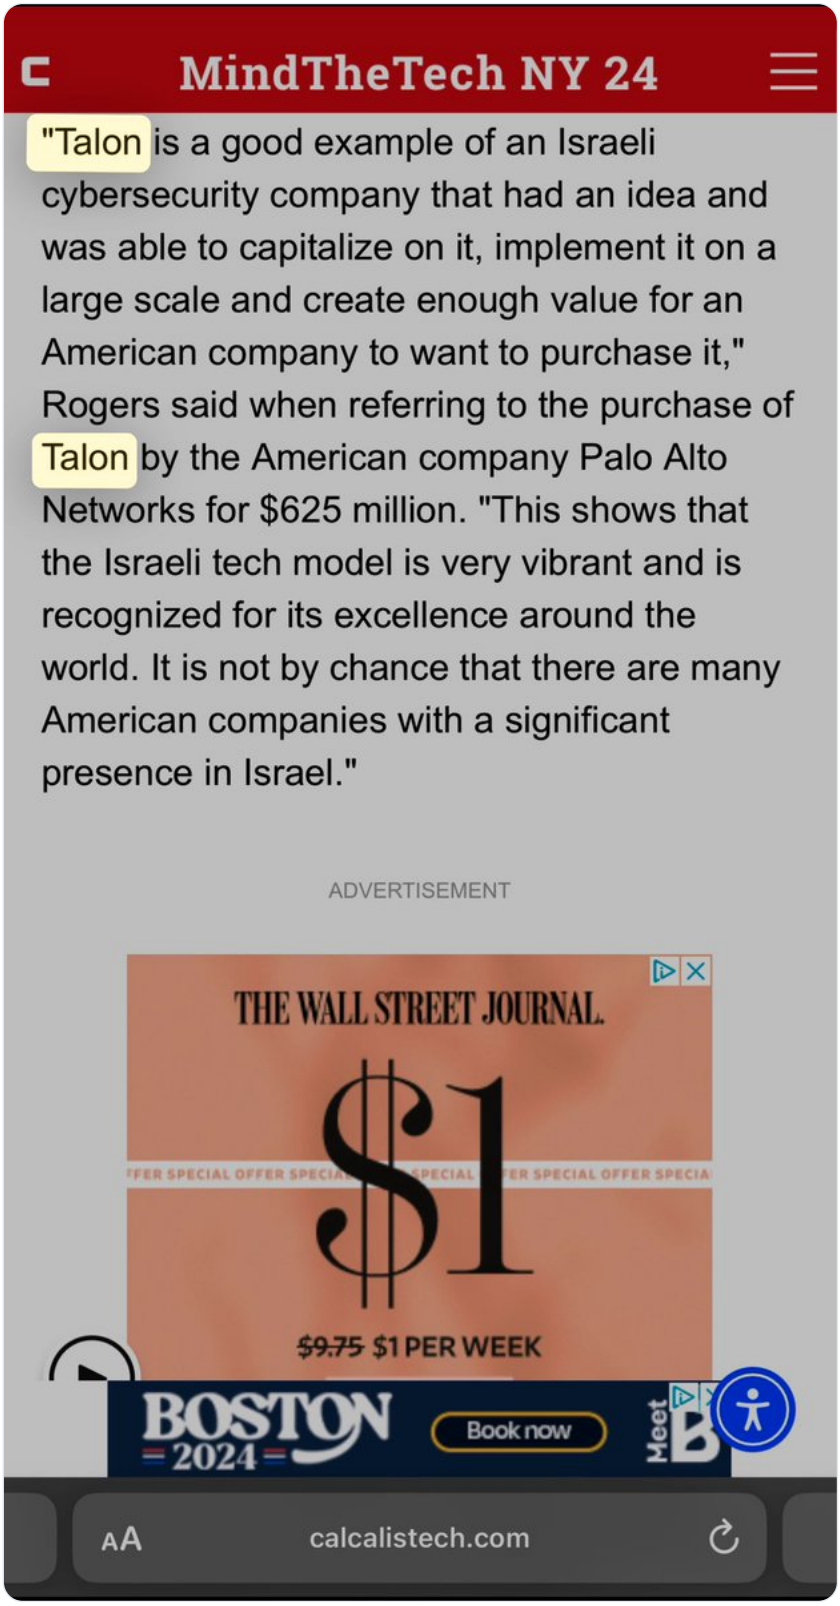
"Even after October 7, Israel's reputation in cybersecurity remains incredibly strong," said Michael Rogers, former Director of the NSA and an Operating Partner at Team8, in a conversation with Calcalist reporter Sophie Shulman at Calcalist and Bank Leumi's Mind The Tech conference in New York.



MindTheTech NY 24
"Talon is a good example of an Israeli cybersecurity company that had an idea and was able to capitalize on it, implement it on a large scale and create enough value for an American company to want to purchase it," Rogers said when referring to the purchase of Talon by the American company Palo Alto Networks for $625 million. "This shows that the Israeli tech model is very vibrant and is recognized for its excellence around the world. It is not by chance that there are many American companies with a significant presence in Israel."

Some things never change, amirite?🤣🖕

In January 1996, Larry, a reticent midwesterner who had gained renown in college by building an ink-jet printer out of LEGOs, and Sergey, a Muscovite by birth and an amateur trapeze artist, started working together on technology to search the Internet. At the time, most search engines based their results on the number of times a search-for term appeared on a given Web site. Larry and Sergey, both in the midst of pursuing their Ph.D.'s in computer science, surmised that it would be better to base searches on relevance; they believed popularity mattered—that the more often a site was linked to, the more relevant it was likely to be. Using complex algorithms, they devised a system they called Page-Rank, after Larry, and they put it at the heart of their search engine, first dubbed BackRub and soon thereafter, Google.

Within two years, Google was the rage among the online cognoscenti, and Larry and Sergey were toying with the idea of starting a company. In August 1998, on a porch in Palo Alto, they delivered a demo to Sun cofounder Andy Bechtolsheim, a legend in the Valley for his engineering prowess and his nose for talent. He took one look at the demo and ambled off toward his car, then came back with a $100,000 check made out to Google, Inc.

In Bechtolsheim, Larry and Sergey had found their first big brother. In short order, they found several others, from whom they collected $1 million in seed money. But Larry and Sergey knew that a million bucks wouldn't last long in the boom-era Valley, so they made their way up to Sand Hill Road, where the Valley's venture capitalists cluster in a kind of multimillionaires' ghetto.

For the most part, Sand Hill Road proved inhospitable to Google. The VCs didn't think search was a promising business; the field was already crowded, the leaders (Yahoo and Excite) firmly entrenched. The VCs also recoiled from the price tag on the deal, which valued Google at a brisk $75 million. And they didn't seem to care much for Larry and Sergey, either. "They really had an attitude," one of them recalls. "It was: We're smarter than you, our stuff is great, everyone else's sucks."

But two VCs felt differently: John Doerr, of Kleiner Perkins, and Mike Moritz, of Sequoia Capital. Doerr was arguably the most important venture capitalist in the Valley, and Moritz was the VC who'd backed Yahoo. With Moritz behind them, Larry and Sergey reasoned, Google would have a line into a company they badly wanted to do business with. Similarly, they saw Doerr and his firm as an avenue into AOL, which Kleiner had financed. For their parts, Doerr and Moritz were as smitten with Google's product as Bechtolsheim had been. The absence of a business plan didn't faze them; nor did the price. Indeed, Doerr was known to advise novice VCs, "If you like the founders and you like the technology, price doesn't matter."

By May 1999, Doerr had decided he wanted to invest in Google, and so had Moritz. Given the connections each could provide, Larry and Sergey were keen, even adamant, about snagging both as backers. There was just one hitch: Neither father was inclined to share custody of his new favorite sons.

Before the internet bubble, it was common for venture firms to team up on deals in order to spread risks and defray costs. By 1999, however, the size of many VC funds had swollen to $1 billion or more, and the venture capitalists had more money than they knew what to do with. Not only was collaboration no longer necessary; it wasn't desirable.

Nowhere was the every-VC-for-himself ethos more ingrained than at Sequoia and Kleiner Perkins. Two of the oldest venture firms in Silicon Valley, they were also the most powerful and influential. But in outlook and demeanor, they were diametric opposites. Kleiner was flashy, promotional, profligate; Sequoia was low-key, gritty, frugal. In the words of one Kleiner partner, William Randolph Hearst III, "KP is Athens; Sequoia is Sparta."

Doerr and Moritz were as different as their firms. Doerr: midwestern, Catholic, schooled as an engineer at Rice University. Moritz: Welsh, Jewish, schooled in history at Oxford. Doerr's introduction to Silicon Valley was selling microchips at Intel. Mor-itz's intro was covering the Valley for *Time*. Where Doerr was an enthusiast prone to hyperbole ("the largest legal creation of wealth in the history

samizdat.co

Doerr and Moritz were as different as their firms. Doerr: midwestern, Catholic, schooled as an engineer at Rice University. Moritz: Welsh, Jewish, schooled in history at Oxford. Doerr's introduction to Silicon Valley was selling microchips at Intel. Mor-itz's intro was covering the Valley for *Time*. Where Doerr was an enthusiast prone to hyperbole ("the largest legal creation of wealth in the history of the planet" was how he famously described the Valley during the boom), Moritz was a skeptic and a cynic (his view of the Valley in 1998: "There's going to be a lot of flesh on a lot of windshields"). And although no overt animosity existed between them, they were rivals who only rarely worked together.

Taking on the task of getting the VCs to commingle were a pair of Google advisers, Ram Shriram and Ron Conway. Shriram, a former Netscape executive and one of Google's seed-money suppliers, had known Doerr for years; and Conway, a Silicon Valley angel investor (one who puts small sums into start-ups before they're ripe for VC funding), was friendly with Moritz. Day after day, Shriram and Conway wheedled and romanced the venture capitalists, all to no avail. "You had to convince both sides that Larry and Sergey were really serious about wanting two VCs," an early Google insider says. "John and Mike both wanted to do the deal alone. It turned into a fight. They didn't realize how headstrong the founders were."

Larry and Sergey couldn't believe what was happening. Neither could Doerr or Moritz. During the dot-com melee, the VCs were constantly confronted with money-hungry children wanting to be taken care of. But here the kids were saying, "You guys have to learn to share."

About a month into the standoff, Larry and Sergey called Conway and said, "Get a list together of your angel friends—we might just do the whole deal with angel money. KP and Sequoia don't get it…. We're gonna give them another couple of days, and then it's over."

Conway and Shriram delivered the message. The next Saturday morning, Conway was sitting in a Starbucks parking lot when he got a call from Shriram. "The fight is over," Shriram said. "They're both going to invest, and it's going to be fifty-fifty."

On June 7, 1999, Google announced the financing: a $25 million infusion, led by Kleiner Perkins and Sequoia. The VCs each now owned roughly 10 percent of Google, and Google now had all the money it would need to pursue its ambitions. But Larry and Sergey had acquired something more valuable than money, and potentially more problematic: a sense that, unlike so many young founders before them, they could defy the grown-ups' wishes and not be punished for it.

Despite their differences, Moritz and Doerr agreed emphatically about one thing: Google needed to hire an A-list CEO, and quickly. Before investing, they had elicited a verbal commitment from Larry and Sergey that they would do just that.

But while Larry and Sergey had assured the VCs that they agreed, they did nothing about it. To be fair, they were busy moving Google and its sixty-odd employees into a new headquarters in Mountain View, which they dubbed the Googleplex; they were coping with skyrocketing popularity, to the tune of 4 million queries a day; and they were striking their first major licensing deal, to provide Web search for AOL/Netscape.

Still, as months rolled by and 2000 approached with no CEO on the horizon, it was clear that the boys were balking about bringing in someone above them. Eventually, they began to make the case ardently against adult supervision, citing Bill Gates, Jeff Bezos, and Michael Dell as precedents. "They saw the founders who had retained control as CEOs as the best, most creative, and most successful," says Dave Whorton, a venture capitalist who was then Doerr's protégé. "What they didn't see were all the others who had failed. That wasn't in their data set."

Moritz monitored the situation with mounting frustration. Suspicious by nature, he'd doubted all along that Larry and Sergey would honor their commitment.

BALLISTIC VENTURES

David Hahn

CISO-in-Residence

Backstory

CISO David Hahn has spent decades building successful cybersecurity programs at leading companies. He is the consummate connector of people and collaborator to enable business growth. His career spans industries, including financial services, where he served as Chief Security Officer of Silicon Valley Bank and as Senior Vice President and Group Information Security Officer at Wells Fargo. Hahn has also held security leadership positions for SaaS companies, including CDK Global and Intuit, and was Vice President and CISO of Hearst, one of the world's largest and most diversified media companies.

In addition to his role as CISO-in-Residence at Ballistic, Hahn is an advisor to many cybersecurity and technology startups, helping them gain market traction and differentiate their solutions. He is also a CISO advisor to Fortinet, one of the largest cybersecurity companies. Hahn holds an MBA from Golden Gate University and spent his undergrad time at San Jose State University.

Over 26 years of focus exclusively on financing for fast growth High-Tech and Life Science businesses. Actively involved in Israel/Europe/US Technology, Life Science and Venture Capital ecosystems.
I'd like to ignite a thoughtful conversation about: The legal revolution
founders-village.com

And SINCE I didn't list any of the MAMRAM fa***ts in the previous post, because it was focused on SVB, I'll list the MAMRAM fa***ts here.

🇮🇱 IDF UNIT 8200 "MAMRAM" Special Forces

👺BORIS VAYNBERG, Solebit Founder

👺OREN DOBRONSKY, #2 on Israel21c “Top Tech Jews of Silicon Valley Infiltration” List

👺TAL MORGENSTERN, Lightspeed Co-Founder & Partner, Sequoia Capital Israel, Bain & Company, Boston Consulting Group

🚨FUN FACT 1: Morgenstern Co-Founded “VULCAN - Mind The Gap” with YANIV BARDAYAN of UNIT 8200 and a GRADUATE of Israel’s HANAN TALPIOT PROGRAM.

BARDAYAN is CEO and Morgenstern is CPO of Vulcan - Mind The Gap”.

🚨FUN FACT 2: SBF founded FTX with seed capital from LIGHTSPEED and SEQUOIA CAPITAL (and other 8200-linked Jew PE firms), while his MOTHER (Barbara Fried) ran an “Elect Democrats” NGO she founded called…

…MIND THE GAP.

Meanwhile, his BROTHER (Gabriel Bankman-Fried) was busy ruing American voter rolls at Columbia University with Civis Analytics and Shira Mitchell, and extorting Congress and asking for gazillions of tax dollars of support for his newly-created “Global Public Health Non-Profit” he founded, damn near EXCLUSIVELY with capital he got from SBF/FTX called…

…GUARDING AGAINST PANDEMICS.

I shit you not, folks. They’ve gotta go.✌🇺🇸☐

(Lol, Hillel Fuld. Get fucked.)

Boris Vaynberg
Founded Solebit
Boris has been a General Manager at Mimecast Israel and the VP of Advanced Threat Detection at Mimecast for the past four years. Previously he was the Co-founder & CEO at Solebit, which Mimecast acquired.
Boris brings over 20 years of operational expertise in leading large-scale cybersecurity projects in the civilian and military intelligence sectors. Boris' experience also includes positions at Elbit Systems' Intelligence and Cyber Solutions division and Comsec Consulting's Information Security division, where he was responsible for product management, business development, marketing, and sales of numerous multi-million dollar security solutions. Prior, he served in the elite technology unit Mamram of the Israel Defense Forces (IDF), where he led a number of teams in both offensive and
founders-village.com

Dobronsky tells ISRAEL21c that one of his "biggest contributions to Israeli high-tech" is securing the first regular non-stop flight from San Francisco to Tel Aviv. In 2014, he launched a petition and 8,500 individuals pledged to buy 35,000 round trip tickets a year. United Airlines launched the new route as a result.

A graduate of Mamram, the prestigious IDF Central Computing Facility, Dobronsky has founded and invested in successful companies including online interior-design startup Houzz.

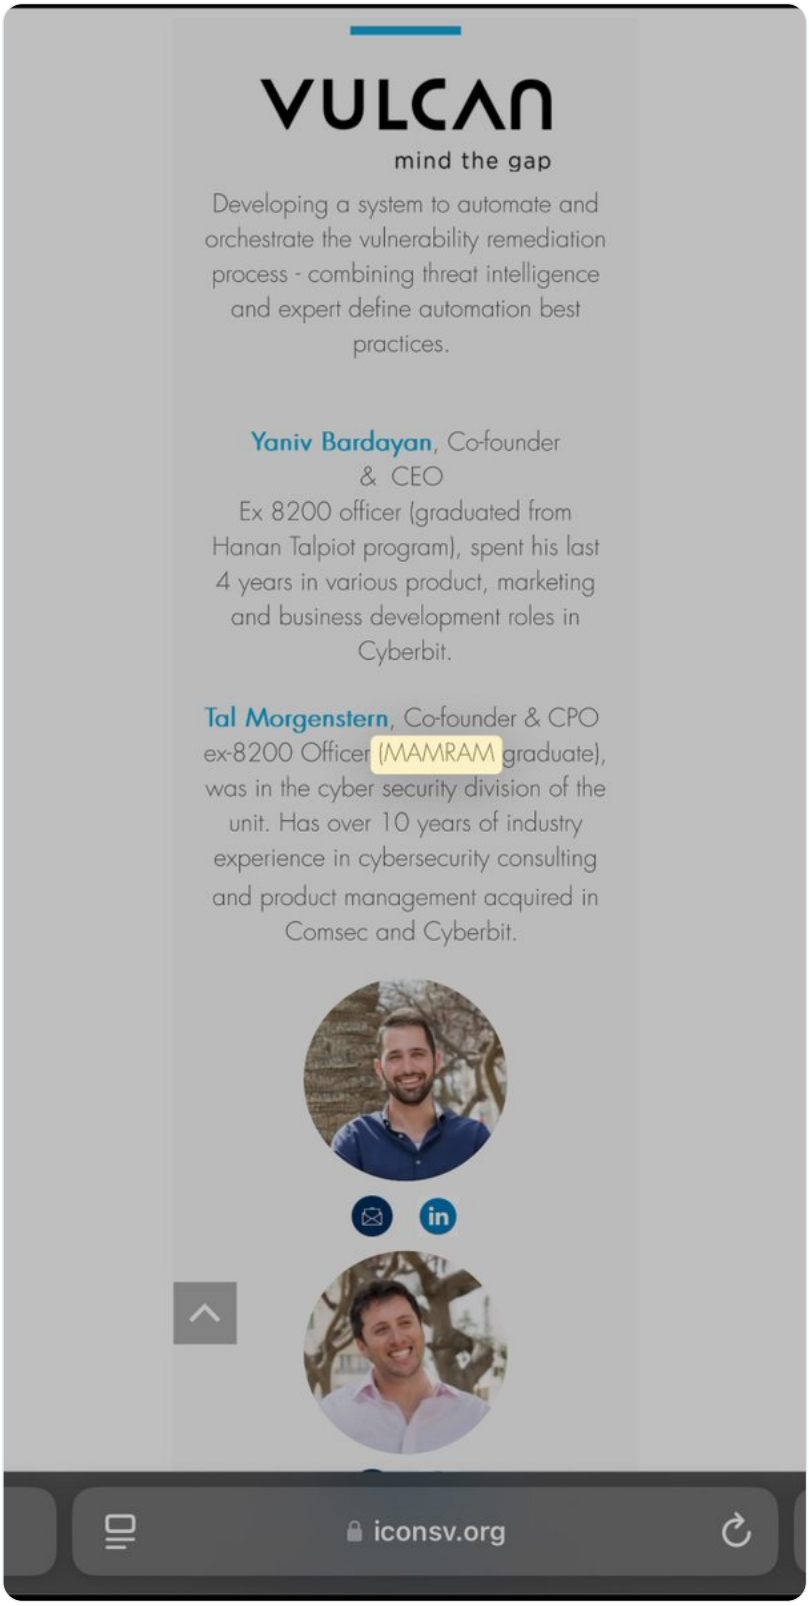
3. Noam Bardin

Noam Bardin, the chief Wazer at Google, is one of the best-known Israelis in Silicon Valley. In 2013, Waze became the first Israeli consumer-app company to be bought for over $1 billion.

Photo of Noam Bardin via Twitter.

Bardin also invests in Israeli tech; he recently participated in a funding round for Airobotics, a Petah-Tikva-based maker of automated industrial drones.

Bardin was included on Business Insider's 100 Stars of Silicon Valley of 2013.



VULCAN
mind the gap
Developing a system to automate and orchestrate the vulnerability remediation process - combining threat intelligence and expert define automation best practices.
Yaniv Bardayan, Co-founder & CEO
Ex 8200 officer (graduated from Hanan Talpiot program), spent his last 4 years in various product, marketing and business development roles in Cyberbit.
Tal Morgenstern, Co-founder & CPO
ex-8200 Officer (MAMRAM graduate), was in the cyber security division of the unit. Has over 10 years of industry experience in cybersecurity consulting and product management acquired in Comsec and Cyberbit.

MAMRAM (Cont'd)

One more thing… I'd HATE for us to forget about ODIGO and THIS absolute fa***t:

👺AVNER RONEN, IDF Unit 8200 "MAMRAM Special Forces" & Co-Founder of ODIGO

*Comverse quickly acquired ODIGO in 2002 for $20,000,000, after the “deed was done”, just 4 years after Ronen co-founded it in 1998. He served as Head of Corporate Development and M&A for Comverse…

…which took in $450,000,000 of GLOBAL JEWRY investment money as another part of his “payoff” for helping to save 4,000 Jewish lives on 9/11 during the TERRORIST ATTACK against the United States (and non-Jews) by ISRAEL and GLOBAL JEWRY.

*I also included more about Oren Dobronsky.

- Avner Ronen is the founder and CEO of Boxee, a freeware media player software platform. Prior to founding Boxee, Avner co-founded Odigo, an instant messaging service. Avner worked with the Odigo team from its founding in 1998 until its purchase by Comverse in 2002 for $20M. Avner stayed on with Comverse as the VP Corporate Strategy & Business Development

  until early 2007.

- Named one of Rolling Stone's "Agents of Change" for 2009, prior to boxee Ronen was the Head of Corporate Development and M&A for Comverse, Inc. a leading provider of software and service to Telecom service providers. Ronen was responsible for acquisitions valued at $450M, which were key to the company's evolution from a Voicemail company to a Billing and VAS provider.

- Ronen joined Comverse in 2002 when they acquired Odigo, a company he co-founded in 1998. Odigo was one of the early Instant Messaging services on the web serving over8M users worldwide, and earned Ronen the 2002 honor of being a member of Crain's 40 under 40.

- Prior to Odigo Ronen served for 4.5 years in the Israeli Defense Force in the special computer unit, MAMRAM.

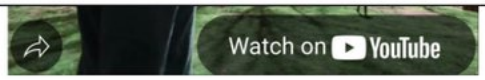
ISRAEL21c presents 15 of the many movers and shakers in the Israeli startup scene in Silicon Valley, in no particular order:

1. Oren Zeev

Silicon Valley inves
courtesy

Oren Zeev and Oren Dobronsky (see next entry) are often mentioned in the same sentence. The two share a sense of responsibility for grooming the next generation of Israelis in Silicon Valley. They're also early investors who take an active company-building role.

Zeev, founder of Zeev Ventures, was an early investor in Chegg, Houzz, Audible, Tipalti and others, and sits on numerous boards of directors. He is also cofounder and chairman of supplier payments automation platform Tipalti.



2. Oren Dobronsky

Wondermall's Oren Dobronsky. Photo: courtesy

Not many high-tech CEOs can claim they own a popular hummus eatery but Oren Dobronsky, cofounder and CEO of virtual shopping mall app Wondermall, sure can. Dobronsky arrived in Silicon Valley in 2008 after eight years in New York.

"Life in the Valley was good, but one thing was missing: a big plate of creamy hummus like back home in Tel Aviv, with fresh pita and Mediterranean salads," the serial entrepreneur, angel investor and Internet veteran explains about his restaurant, which caters to the startup community and is the scene of many business deals.

Dobronsky is a member of TechAviv Angels — a group of 30 Israeli tech stars with combined exits of $3 billion – who identify, fund and mentor Israeli startups in Israel, New York, Silicon Valley and Boston.

H

Jeff Greenberg and Mark Wiseman join Hakluyt International Advisory Board

January 2022

Hakluyt is proud to announce that Jeff Greenberg and Mark Wiseman have joined the company's advisory board.

The Hakluyt International Advisory Board provides the firm with advice and connectivity across the globe. It is chaired by Niall FitzGerald KBE, former CEO and chairman of Unilever, and members are drawn from the worlds of business, government and academia.

Jeff Greenberg has several decades of experience in the insurance industry, having been chairman and CEO of Marsh & McLennan and executive vice president of AIG's domestic brokerage group. After leaving insurance, he founded Aquiline Capital Partners, a private investment firm based in New York and London with $7 billion in assets under management, where he is now chairman and CEO. Jeff is also a trustee of the Metropolitan Museum of

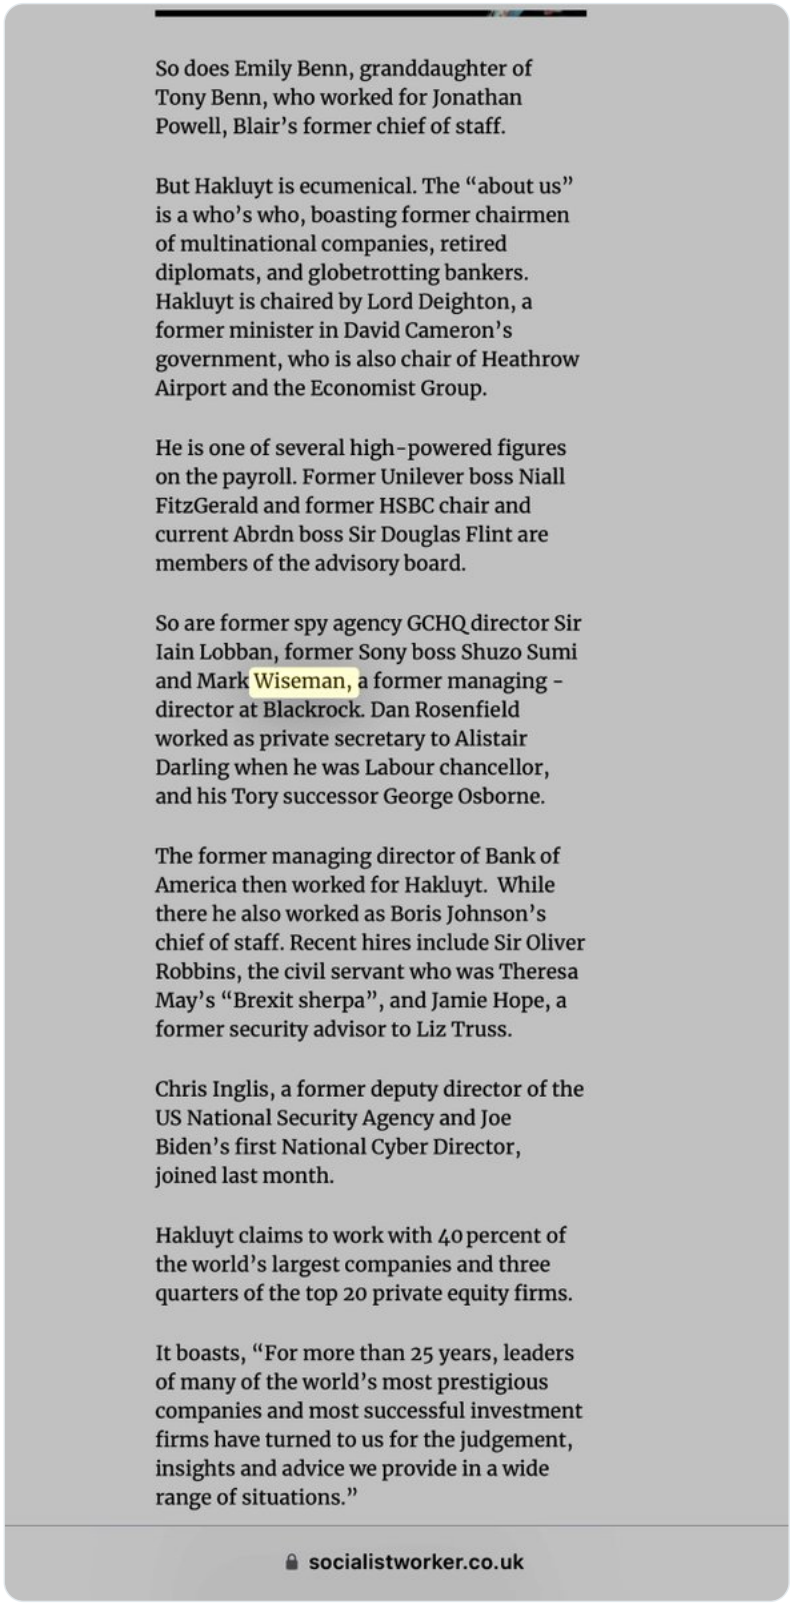
Former Chair, Santander UK

Mark Wiseman
Former Senior Managing Director, BlackRock
Former CEO, Canada Pension Plan Investment



So does Emily Benn, granddaughter of Tony Benn, who worked for Jonathan Powell, Blair's former chief of staff.

But Hakluyt is ecumenical. The "about us" is a who's who, boasting former chairmen of multinational companies, retired diplomats, and globetrotting bankers. Hakluyt is chaired by Lord Deighton, a former minister in David Cameron's government, who is also chair of Heathrow Airport and the Economist Group.

He is one of several high-powered figures on the payroll. Former Unilever boss Niall FitzGerald and former HSBC chair and current Abrdn boss Sir Douglas Flint are members of the advisory board.

So are former spy agency GCHQ director Sir Iain Lobban, former Sony boss Shuzo Sumi and Mark Wiseman, a former managing - director at Blackrock. Dan Rosenfield worked as private secretary to Alistair Darling when he was Labour chancellor, and his Tory successor George Osborne.

The former managing director of Bank of America then worked for Hakluyt. While there he also worked as Boris Johnson's chief of staff. Recent hires include Sir Oliver Robbins, the civil servant who was Theresa May's "Brexit sherpa", and Jamie Hope, a former security advisor to Liz Truss.

Chris Inglis, a former deputy director of the US National Security Agency and Joe Biden's first National Cyber Director, joined last month.

Hakluyt claims to work with 40 percent of the world's largest companies and three quarters of the top 20 private equity firms.

It boasts, "For more than 25 years, leaders of many of the world's most prestigious companies and most successful investment firms have turned to us for the judgement, insights and advice we provide in a wide range of situations."

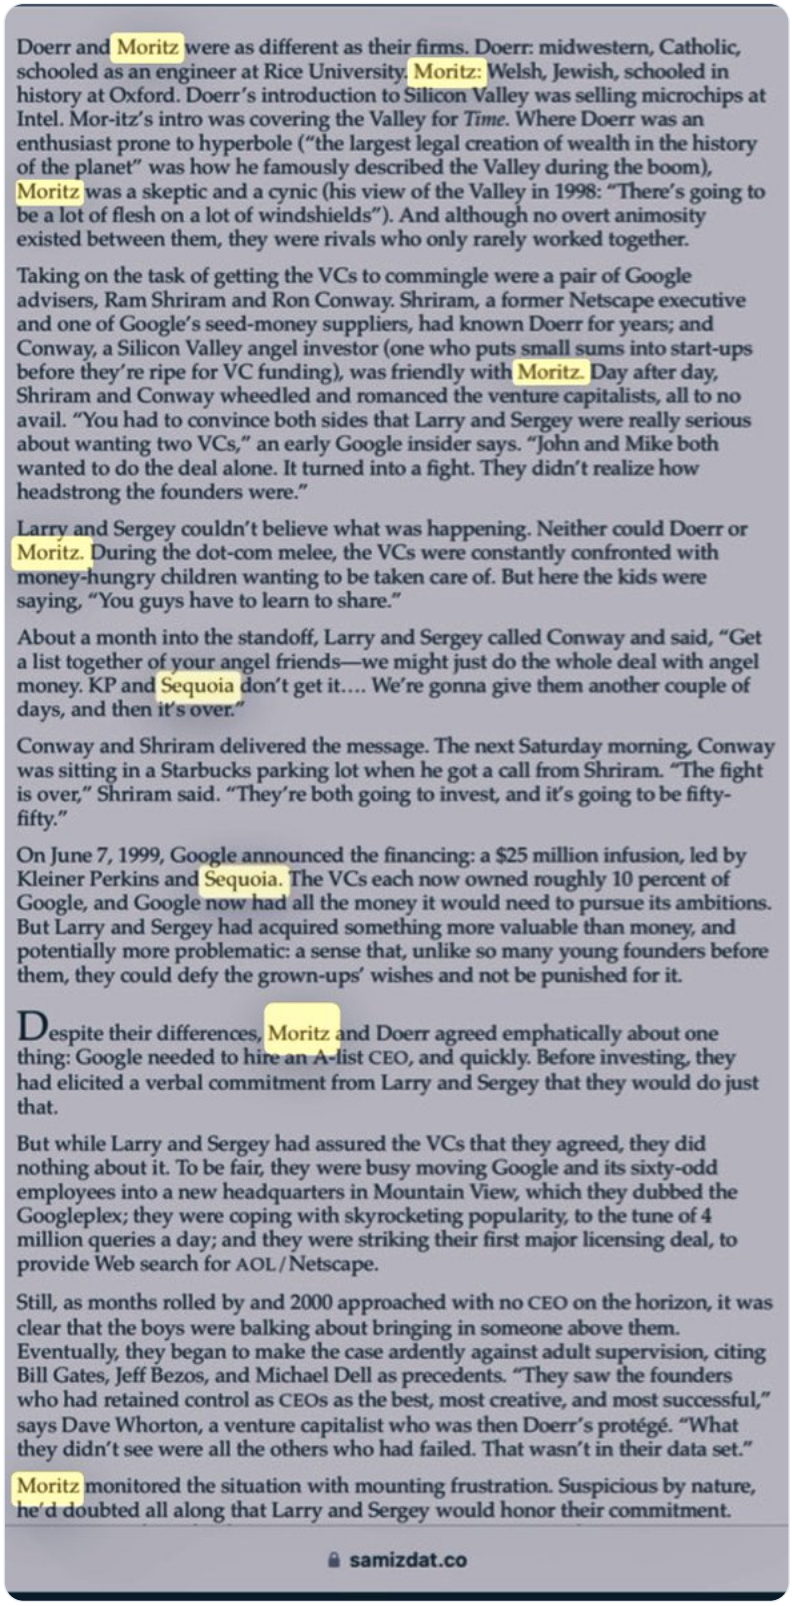
A Powerful Syndicate of Investors

We had the fortune to collaborate with a unique set of investors.

Team8 was a seed investor in Talon from its inception alongside **David Gussarsky** from **Lightspeed**. Quickly following winning the RSA Innovation Sandbox, the company has raised a remarkable $100M+ A-Round of funding, led by **Richard Seewald** at **Evolution Equity Partners.** Additional partners on the journey: **Jay Leek** from **Syn Ventures, Jake Seid** from **Ballistic Ventures, Ken Elefant** from **Sorenson Ventures,** and **Shay Michel** from **Merlin Ventures.**

George Kurtz, CEO of CrowdStrike, alongside **Crowdstrike** itself (with its corporate development lead Gur **Talpaz**) have also been part of this journey as strategic investors and partners to Talon's journey.

team8.vc



Doerr and Moritz were as different as their firms. Doerr: midwestern, Catholic, schooled as an engineer at Rice University. Moritz: Welsh, Jewish, schooled in history at Oxford. Doerr's introduction to Silicon Valley was selling microchips at Intel. Mor-itz's intro was covering the Valley for *Time*. Where Doerr was an enthusiast prone to hyperbole ("the largest legal creation of wealth in the history of the planet" was how he famously described the Valley during the boom), Moritz was a skeptic and a cynic (his view of the Valley in 1998: "There's going to be a lot of flesh on a lot of windshields"). And although no overt animosity existed between them, they were rivals who only rarely worked together.

Taking on the task of getting the VCs to commingle were a pair of Google advisers, Ram Shriram and Ron Conway. Shriram, a former Netscape executive and one of Google's seed-money suppliers, had known Doerr for years; and Conway, a Silicon Valley angel investor (one who puts small sums into start-ups before they're ripe for VC funding), was friendly with Moritz. Day after day, Shriram and Conway wheedled and romanced the venture capitalists, all to no avail. "You had to convince both sides that Larry and Sergey were really serious about wanting two VCs," an early Google insider says. "John and Mike both wanted to do the deal alone. It turned into a fight. They didn't realize how headstrong the founders were."

Larry and Sergey couldn't believe what was happening. Neither could Doerr or Moritz. During the dot-com melee, the VCs were constantly confronted with money-hungry children wanting to be taken care of. But here the kids were saying, "You guys have to learn to share."

About a month into the standoff, Larry and Sergey called Conway and said, "Get a list together of your angel friends—we might just do the whole deal with angel money. KP and Sequoia don't get it.... We're gonna give them another couple of days, and then it's over."

Conway and Shriram delivered the message. The next Saturday morning, Conway was sitting in a Starbucks parking lot when he got a call from Shriram. "The fight is over," Shriram said. "They're both going to invest, and it's going to be fifty-fifty."

On June 7, 1999, Google announced the financing: a $25 million infusion, led by Kleiner Perkins and Sequoia. The VCs each now owned roughly 10 percent of Google, and Google now had all the money it would need to pursue its ambitions. But Larry and Sergey had acquired something more valuable than money, and potentially more problematic: a sense that, unlike so many young founders before them, they could defy the grown-ups' wishes and not be punished for it.

Despite their differences, Moritz and Doerr agreed emphatically about one thing: Google needed to hire an A-list CEO, and quickly. Before investing, they had elicited a verbal commitment from Larry and Sergey that they would do just that.

But while Larry and Sergey had assured the VCs that they agreed, they did nothing about it. To be fair, they were busy moving Google and its sixty-odd employees into a new headquarters in Mountain View, which they dubbed the Googleplex; they were coping with skyrocketing popularity, to the tune of 4 million queries a day; and they were striking their first major licensing deal, to provide Web search for AOL/Netscape.

Still, as months rolled by and 2000 approached with no CEO on the horizon, it was clear that the boys were balking about bringing in someone above them. Eventually, they began to make the case ardently against adult supervision, citing Bill Gates, Jeff Bezos, and Michael Dell as precedents. "They saw the founders who had retained control as CEOs as the best, most creative, and most successful," says Dave Whorton, a venture capitalist who was then Doerr's protégé. "What they didn't see were all the others who had failed. That wasn't in their data set."

Moritz monitored the situation with mounting frustration. Suspicious by nature, he'd doubted all along that Larry and Sergey would honor their commitment.
